I want to go to Space Camp because it sounds like a fun, educational and interesting experience.

The main reason that I want to go to Space Camp is because I want to be an astrophysicist. Space Camp would teach me the things that I would probably need to know as an astrophysicist, such as how forces like drag, thrust and lift affect a rocket and its passengers during the flight. Space Camp would also teach me more about the history and projected timeline of space travel, which I find very interesting. Also, Space Camp will teach me how to operate in conditions similar to those in space, which will help with designing rockets and working on/in one. Space Camp sounds like a very interesting and educating experience, and will probably help me become an astrophysicist.

The other reason that I want to go to Space Camp is because it sounds very fun. My friend attended last year, and she said it was a total blast. Even without her recommendation, Space Camp still sounds fun, I take a pleasure in learning, but I am very interested in the activities like the 5-degrees of freedom chair and the MMU Simulator. I also really love flying in planes and staying in hotels, so literally from the beginning I will be having a great time. Also, I might be able to make some friends, if we go to the same camp, then we must share at least one common interest, which is enough to make friends.

I want to go to Space Camp because it sounds like an interesting, educating and fun experience.
