I would like to come to space camp for a few reasons. I have done some programming with java script and enjoy it. About three years ago I had to build a spaceship and read about its programming. I learned about how spaceships work and immediately wanted to know more. I won a technology award for my creativity and design in this project. Now, I would like to brighten my horizons even more and attend space camp. This would be a great opportunity for me to do that. Space ships have always fascinated me and I have always loved astronomy and spend time looking at the constellations. I am on a robotics team that has won Grand Championship and is now heading to a state competition.

I'm a hard worker and I am always ready to learn with a smile on my face. I take school seriously and always get my homework on time and make sure I got everything correct. I enjoy studying and spending time figuring out algebraic and trigonometrical problems. I have a strong mind, and am creative with the work I do. I spend most of my time on the computer programming and having fun with math and science.

For all my life I have enjoyed mathematical and scientific questions. In school I use my ability to break down problems to help with questions my peers can't understand and also have interesting philosophical conversation with students and teachers.This is one of my favorite things to do and I spend a good amount of time doing it.

In conclusion, I would make a good candidate for this scholarship because I am knowledgeable in this field, creative and interesting,
