Space Camp Essay

I would like to go to space camp for many reasons one of them is that I love science and math. I understand how these are both big parts in going to space and making sure you don't die getting there. I am very good at math and am in my school's advanced program and although I don't know a lot about science I am open to learning more. When we were learning about space in science class we were assigned planets and had to make advertisements on why you should live there. My group was assigned Venus which is very hot with a surface temperature of over 800 degrees fahrenheit because its atmosphere traps the heat in. Since humans can't live in that type of heat I developed nitrogen suits (unrealistic I know) that would use special technology to keep you safe so you wouldn't burn up if you ever went outside which was not advised. The teacher liked my creative thinking and we had a good advertisement.

Another reason I would like to go to space camp is to learn more about space. In school we haven't gone over much about space and the stuff we do cover never answers my questions. Going to space camp would be a good opportunity to answer all of my questions and learn more about space and all of the cool things it has and I could meet new people. These are the reasons I would like to go to space camp.
