

Why do I want to attend space camp?

When I was 8 years old I first visited a big planetarium . Since that age I was known about planets but I was having no idea how big they are , at the same time in planetarium I saw an astronaut working in international space station and I asked my mom , why that astronaut can float and we not . my mummy replied that every object in space behave in similar manner . That night , those thoughts of planets and astronaut wiped out my sleep. Second day with sleepless eyes I decided to be the youngest astronaut of the world . Today I am 16 years old and I am dogged for attaining my first space camp . I want to attain space camp to experience astronaut trainings . working with other young astronauts will help in building qualities like leadership , cooperation , etc . This training will bring confidence in me . It will help me to know about my mistakes and difficulties in training so that I will prevent those mistakes when I become an astronaut .

Though I am studying astronomy from my early age , I had never experienced or used that knowledge practically . I am very excited for space camp because its my first practical experience and it will let ,me know bunch of my mistakes . Actually I am so excited to know about the mistakes because it will get more knowledge and I will try to perform more better . This space camp will give me the confidence that I am on the right way of my career and will encourage me to work more harder to reach my goal . it will give me the experience of the part of my career . including practical knowledge I will too sget to learn lot of stuffs relating to space. I will too get to talk with different astronomers , astrophysicist , astronauts , from whom I can gain lots of knowledge and guidance . The space camp will also be beneficial for me in making my scientific attitude much better . it will help me to learn different subjects regarding astronomy from youngsters from different countries .

My favorite topic in astrophysics is black hole so I can get lot of coo facts of black holes from astronomers and astrophysicists there . There are lot of questions in my mind regarding universe which today science is proceeding to solve . So I will get to know cool theories about solving those questions . getting known about my experience my friends or brothers and sisters will too get interest in space science which will obviously develop space science . since that's what I know about space camp , there are lots of stuff waiting for me .Thus I want to attain space camp and I am really excited for it
