

WHY I WANT TO GO TO THE SPACE CAMP?

Do you like reading? I love reading , or I would say that reading is my passion . So when I was reading a book on space I fell in love with space, universe and NASA . Since then I started dreaming of working in the field of space .

And guess what I started finding my interests there . Then I found out about this fellowship given to the students worldwide by the U.S. Space and rocket center. So I decided to give a try to this scholarship .

Actually my senior had applied for this scholarship . And she shared one of the experiences with me after she came back from the space camp . She said that she had lovely experiences at the space camp.. She said that it is real luck if you get a chance to go there . She told me a lot about her experiences she had on the simulators . So I decided to have these experiences in my life too.

Everyone has dreams . I also dream of something . Now I want to tell you what I dream about . I dream of applying for this scholarship and get a chance at least once to go to U.S. space and rocket center. And I wish that my dreams get complete . I am ready to work hard if I get this opportunity . I started dreaming of this because of many reasons you'll read ahead .

My dreams are built up when I get inspired from people and really want to be like that person . I am inspired from an Indian personality who is Dr. APJ Abdul Kalam. He was once the president of India, the country in Asia. He was a very inspirational person . He taught all Indians that if you have dreams you should go behind them and chase them .He is also a founder of the ISRO (Indian Space Research Organisation). If he had not been there I would not have actually thought about the space camp and the fellowship given by it . I think that not only me but everyone should be like him . I want to chase my dreams .

You all must have heard many students at my age getting inspired from movies . I am motivated from an Indian movie named 'Mission Mangal'. It is a movie related to the space mission 'Mangalyaan' launched by the Indian Space Research Organisation . In this movie they face a lot of hardships . But still they don't get demotivated . The success of India's very first interplanetary mission 'mangalyaan' is a result of their perseverance and

dedication. Even the idea of me getting to see how such a big organisation works is so exciting!

These are some reasons why I want to go to the space camp . I want to atleast give a try and want to see do I really deserve to get this chance . I believe in my passion and interests . So, I hope my passion and interests get atleast one chance to visit the U.S. Space and rocket center .

END
